

Ilijan Militar

Front End Developer

ilijan.militar@gmail.com

066/510-5410

Belgrade, Serbia

github.com/Ilijan91

Over the past several years, I have worked extensively with Angular, React and TypeScript, creating responsive and dynamic user interfaces for a variety of web applications. I am well-versed in the latest web development technologies and tools, including HTML5, CSS3, and JavaScript, and I have a deep understanding of front-end architecture and design patterns.

WORK EXPERIENCE

Front End Developer Dassom Digital

07/2024 - Present

Remote

- Angular v18
- React v15
- Working on Finance Automation Portal for eToro
- Working on CMR (Client Money Reconciliation)
- Working on PSP (Payment System Providers)

Front End Developer Felicons DOO

12/2022 - 07/2024

Belgrade-Serbia

- Ionic
- Angular v13, v15, v17
- React v15, v16
- Learning new technologies (C#, NET)
- Working with FXGT , trading platform
- Working on Risk tool exposure monitoring software

Front End Developer Things Solver

09/2020 - 12/2022

Belgrade-Serbia

- Working on Product Services (AI-Driven)
- Campaigning Studio (Viber, email)
- Segmentation Studio
- Customer Studio
- Angular
- React

Internship / Full Stack developer Quantom Technology

02/2020 - 08/2020

Belgrade, Serbia

- Learning technologies, and best practices
- Laravel
- Angular
- GIT

SKILLS

EDUCATION

Software Developer (2016 - 2018)

IT Academy

HTML/CSS, Bootstrap

JavaScript, Typescript, PHP, MySQL

LANGUAGES

Serbian ● ● ● ● ●
English ● ● ● ● ○

INTERESTS

ASP.NET C# Microservices PHP

FrontEnd Developer

Dassom Digital DOO (07/2024 - Present, Remote)

- Developed and maintained highly responsive user interfaces for web applications using Angular (v13, v15, v17) and React (v15, v16).
- Contributed to various high-impact projects, including:
 - **PSP (Payment Service Provider):** Played a crucial role in transforming raw payment data through a hierarchical framework from Bronze to Silver to Gold data levels, ensuring enhanced data accuracy, consistency, and usability. Streamlined payment processing workflows and optimized the platform for scalability and compliance with security standards.
 - **Client Money Reconciliation (CMR) Project:** Developed critical features for managing client money reconciliation processes, ensuring accurate tracking of financial transactions, compliance with regulatory requirements, and robust reconciliation between client accounts and operational ledgers.
 - **Crypto Wallet:** Designed an intuitive and secure interface tailored for accountants, enabling efficient management of cryptocurrency transactions, balances, and audit trails. Focused on usability and integration with broader financial systems.
 - **PSP Modular Dynamic Report Mapping (as part of the FAP portal):** Created a dynamic reporting module, empowering users to generate customizable financial analytics. Mapped data from multiple payment sources into unified, actionable reports for improved decision-making.

FrontEnd Developer

Felicons DOO (12/2022 - 07/2024, Belgrade, Serbia)

- Developed and maintained highly responsive user interfaces for web applications using Angular (v13, v15, v17), React (v15, v16), and Ionic.
- Collaborated with backend developers, UI/UX designers, and product teams to deliver high-performance applications.
- Implemented state management solutions and optimized application performance for scalability and efficiency.
- Contributed to various high-impact projects, including:

Risk Tool Exposure Monitoring Software

- Developed a real-time risk exposure monitoring system that provides financial institutions with critical insights into market risks.
- Designed and implemented interactive dashboards with dynamic filtering, ensuring users can analyze risk metrics efficiently.
- Integrated WebSockets for real-time data updates, allowing traders and risk managers to react instantly to market fluctuations.
- Ensured compliance with financial regulations by implementing security best practices and data encryption techniques.

FXGT Trading Platform

- Built responsive and intuitive trading interfaces for FXGT, a leading trading platform supporting forex, crypto, and other financial assets.
- Developed real-time charts and market data visualizations using libraries such as Chart.js and D3.js.
- Integrated REST and WebSocket APIs to provide real-time price updates, order execution feedback, and market analysis tools.
- Optimized mobile and web performance, reducing load times and improving UI responsiveness for traders executing time-sensitive transactions.

Front End Developer

Things Solver (09/2020 - 12/2022, Belgrade, Serbia)

- Designed and implemented AI-driven product services and customer engagement platforms.
- Worked on tools like Campaigning Studio (Viber, email campaigns), Segmentation Studio, and Customer Studio, enabling personalized marketing and data-driven decisions.
- Built modular and reusable UI components using Angular and React, improving the development team's efficiency by 30%.
- Collaborated closely with cross-functional teams to enhance customer platforms, delivering seamless user experiences.

Internship / Full Stack Developer

Quantox Technology (02/2020 - 08/2020, Belgrade, Serbia)

- Acquired hands-on experience in full-stack development, utilizing Laravel for backend services and Angular for frontend interfaces.
- Built and tested web application features, following industry best practices for coding and version control using GIT.
- Strengthened core software development skills and problem-solving techniques, setting the foundation for a successful career in development.
